

Techniline Ops

User Guide for Maricel

App: <https://techniline-ops-app.vercel.app>

Sign in: open the link, then enter your email and password. The left menu lists your sections (Dashboard, Checklist, Priorities, LP Tracker, Amazon Actions). On a phone, the menu icon at the top-left opens the menu.

1. Start your day - Dashboard

- Opens to the Dashboard: small KPI tiles for each area (today's checklist, reseller deals, LP stock, Amazon actions).
- It is a quick glance. Click **View** on any tile to jump into that section.

2. Checklist - your daily tasks (do every day)

- 1 Click **Checklist** in the menu.
- 2 Tasks are grouped into sections. **Reseller Operations** is pinned at the top in purple - that is the priority.
- 3 Mark each task done: **one-tap** tasks have a **Confirm** button; **count** tasks ask for a number then **Submit**; if there was nothing to do, click **Nothing to action today**.
- 4 Finished sections fold up automatically, so you only see what is left. A green count means a section is fully done.
- 5 **Weekly tasks** (e.g. submit LP vouchers) appear only on their day (Friday or Monday) - no need to look for them daily.

2a. Reseller deals - the purple 'Priority' card at the top

Every time you create a deal in Zoho CRM, log it here straight away (do not wait for end of day):

- 1 Copy the Zoho **deal URL or deal ID**.
- 2 Paste it in the box and click **Validate & Log** (or press Enter).
- 3 It checks Zoho and shows the deal name with a **verified** badge, and 'Today: N logged' goes up.
- 4 The task marks itself done once you have logged at least one deal.

2b. If you are on leave

- 1 On the Checklist, click **Leave / absence** (top right).
- 2 Pick the From / To dates and a reason, then **Add leave**.
- 3 On those days no checklist is generated for you, so you are not marked as having missed work.

3. Priorities - tasks assigned to you + your own

- 1 Click **Priorities**. You will see priorities assigned to you.
- 2 Update each one: set **progress %**, **Mark in progress**, add a **note**, or **Mark complete**.
- 3 To add your own: click **+ New Priority**, fill in title, due date, priority level and notes, then **Create**. It is assigned to you automatically.

4. LP Tracker - local purchases

The Overview (default screen) shows every LP by vendor with its ageing - nothing to load.

Add a new LP (LPO):

- 1 Click **Upload LP** and choose the LPO PDF.
- 2 Check the captured details on the **Verify** screen and fix anything wrong. Set the **Goods Received Date** (when stock arrived - ageing counts from here).
- 3 Click **Verify & Save**.

Record a sale against stock:

- 1 In **Overview**, expand the LPO, find the line, and click **Record sale**.
 - 2 Enter sold qty, invoice number, entity (AI Shoala / SLM / HQ / MM / CNL / Other), salesman and date, then **Save**.
 - 3 Remaining quantity and ageing update automatically.
- **Browse lines:** pick a date range, click **Load data**, then search/filter. **Clear** empties it.
 - **Reports:** export **CSV or PDF** (current view, vendor + date range, or entity-wise sold), or email the stock-in-hand report to impex@techniline.org.

5. Amazon Actions - your open Amazon work

- 1 Click **Amazon Actions**. The list shows only your real open items (POs to confirm, the open dispute).
- 2 Use the **tabs** (PO Confirmation, Disputes, etc.) to filter; the search and tabs stay pinned at the top.
- 3 To close an item: click its row, choose **Add details / log action**, record the reference or reason, and save. It then moves to resolved (tick **Show resolved** to see closed ones).

Handy tips

- Log reseller deals the moment they happen - the count is automatic; if you wait, you may forget.
- The left menu stays put and tables scroll on their own - drag the bottom scrollbar to see more columns.
- A green count on a checklist section means it is fully done.
- Nothing you submit is lost - if email or Zoho ever hiccups, your data is still saved.
