

TECHNILINE OPERATIONS

User Manual

A single guide for everyday use of the Techniline Ops app.

Section	For the designation
1. Getting started & shared tools	Everyone
2. Operations Coordinator	Stock, finance & purchasing
3. Marketplace Specialist	Cocoblu & Music Majlis
4. Manager	Oversight, scorecard & reporting
5. Logistics	Warehouse — deliveries & order fulfillment

This manual uses designations only. Wherever it says “you”, it means the person holding that designation. Keep this copy at your desk.

1. Getting started & shared tools

These apply to everyone, regardless of designation.

Signing in & the layout

- Open the app link in your web browser. Sign in with your work account; the menu on the left shows only the sections your designation is allowed to use.
- **Dashboard** is your home screen — module cards plus live performance bands.
- The left menu is sticky and the page heading stays on screen while you scroll.
- It works the same on phone and computer.

Dashboard

- Shows cards for the sections you can open, and key-figure bands at the bottom.
- Open any card to go to that section. Bands refresh when you reload the page.

Checklist — your daily work, with proof

The checklist is how daily duties are tracked. A task is only complete when you add **evidence** — not just a click.

- 1 Open **Checklist**. Tasks are grouped by category and by how often they recur (daily / weekly / one-off). Completed sections collapse automatically.
 - 2 Do the task, then submit it with the proof it asks for: a short note, a count, an uploaded screenshot/PDF, or a “nothing to action” note where relevant.
 - 3 On success the task moves to done and your proof is saved to the work log. If something is wrong, you’ll see an error and the task stays open — it never silently marks done.
- **Sundays** are skipped, and no tasks are generated on your approved leave days (leave register).
 - Tasks not submitted by their cut-off time are logged as a breach (visible to the Manager).

Priorities

- Objectives assigned to you with a level (P1/P2/P3) and a due date.
- Open one to update its progress and mark it complete.

Blockers — flag anything holding you up

Use Blockers for anything stopping you (or a small reminder to-do). It captures who raised it and when, and shows how old it is.

- 1 Open **Blockers** → **+ Add blocker**. Type what’s blocking you and an optional note.
- 2 Each open blocker shows an ageing badge (green → blue → amber → red as it gets older).
- 3 When it’s sorted, click **Resolve** to clear it from the list (it’s kept in history).

2. Operations Coordinator

Stock holding, purchasing and finance follow-up. You can use: Checklist, Priorities, Blockers, LP Tracker, and the Finance/Amazon screens.

LP Tracker (Local Purchase / LPO stock)

Local purchases have no return agreement, so old stock is real risk. LP Tracker shows what was bought, how old it is, and what's still in hand.

Ageing overview (opens by default)

- One row per LPO, grouped by vendor, with an ageing badge and remaining qty/value — **no line data is loaded** until you ask for it, so it stays fast.
- **Goods Received Date** drives ageing. Set/edit it per LPO; if blank, the LP date is used.
- Expand an LPO to load just its lines.

Add a new LPO

- 1 Go to **Upload LP**, upload the LPO PDF — it's read automatically into a draft.
- 2 Check the header and every line in the verify step (edit anything misread; changing a quantity asks for a comment for the record). Set the Goods Received Date.
- 3 Save — the LPO and its lines are stored, and the PDF is filed under **LP PDFs**.

Record a sale (draw-down)

- 1 Open **Browse lines**, pick a date range and click **Load data**.
- 2 On a line, choose **Record sale**: enter sold qty, invoice number, entity (Al Shoala / SLM / HQ / MM / CNL / Other), salesman and date.
- 3 Remaining quantity and ageing update automatically; expand a line to see its sale history.

Search, filter & reports

- Premium search across brand, vendor, LP number, date and SKU; per-column filters on Vendor / Brand / Model.
- **Reports** (each with CSV + PDF): current view, vendor + date range, and entity-wise sold (detail + totals per entity).
- **Send stock-in-hand** emails the current stock report to impex@techniline.org.
- A price-change badge flags when the same SKU was bought at a different price than before.

Finance & Amazon screens

- **Amazon Actions** — your work queue of open Amazon issues (returns, shortages, disputes). Search, tabs and a Show-resolved toggle stay pinned while you scroll. Log reference numbers and drive each item to closure; resolved items drop off.
- **Disputes / Remittances / Returns** — the supporting finance screens for tracking those records.

3. Marketplace Specialist

Marketplace stock and the Music Majlis online store. You can use: Checklist, Priorities, Blockers, Cocoblu, and the Music Majlis sales tools.

Cocoblu (consignment stock ageing)

Cocoblu stock starts incurring **storage charges after 90 days**, so it must be sold or returned before then. This screen makes the at-risk stock obvious.

Ageing overview (opens by default)

- One row per invoice with an ageing badge and a prominent **90+ days storage-risk** figure. Key numbers reflect **all** open stock, not just what's on screen.
- Expand an invoice to load its lines, then **Update Qty** or edit as needed.

Add / load stock & export

- 1 **Upload Invoice** reads a supplier invoice PDF into a draft to verify and save; **Add record** enters one manually; stored PDFs live under **Invoices**.
- 2 **Browse lines**: pick an invoice-date range, **Load data**, then **Clear** to unload.
- 3 **Reports**: export the current view to CSV or PDF.

Music Majlis — sales target & abandoned carts

Drives the monthly online-sales target and the recovery of abandoned checkouts. Find this as the green **MUSICMAJLIS** band on the Dashboard.

Reading the band

- **Monthly Target** (set by the Manager) and **Achieved (net sales)** from the store.
- **% Achieved** and **Today's Target** — today's target is recalculated daily as $(\text{target} - \text{achieved}) \div \text{remaining working days (Mon-Sat)}$.
- **Abandoned Carts (yesterday)** — your daily worklist. Monday covers Sat+Sun; Sunday shows nothing.
- **Recovered, Abandoned (this month), Actioned-Deals**, and **Recovery Rate** — the monthly trend (resets on the 1st).

Action yesterday's abandoned carts (do this daily)

- 1 Click the **Abandoned Carts** tile to open the list of yesterday's carts.
- 2 For each cart, either **Create Zoho deal** (adds it to the *Back-to-Back Orders* pipeline as "... – MM Abandoned Cart"; it checks for a duplicate by email first and links the existing deal if found — then finish the details in Zoho CRM), or **Mark actioned** to clear it.
- 3 Actioned carts drop off the count here. Older carts from earlier in the month are kept as history only — focus on fresh ones each day.

Log a recovered cart

- 1 Click **Log recovered cart** and enter the recovered Shopify order number.
- 2 It's validated against the store as proof, then added to this month's Recovered total.

4. Manager

Full oversight of every section above, plus the tools below. The Manager is measured on team outcomes and risk reduction, not on daily checklist ticks.

Manager Scorecard (Dashboard, monthly)

The violet **MANAGER SCORECARD** band summarises the month (it resets on the 1st):

- MM Target Attainment % and Recovery Rate.
- Cocoblu 90+ storage-risk and LP aged-90 — the holding-cost risks (lower is better).
- Amazon open actions.
- Open blockers (with the oldest age) and checklist breaches this month.

Monthly summary email to the Sales Head

- 1 On the Scorecard band, click **Send monthly summary**.
- 2 Enter the recipient's email (e.g. the Sales Head). It's saved as the default for next month and stays editable each time.
- 3 Review the preview (sales vs target, holding-cost risk, team), then **Send email**.

Other manager-only controls

- **Set MM target** on the Music Majlis band — set the new monthly target on the 1st.
- **Send weekly summary** on the Dashboard.
- **Priorities** — create and assign objectives to staff.
- **Blockers** — tick **Everyone's** to see and resolve any staff member's blockers.
- Full visibility across Checklist submissions, LP Tracker, Cocoblu, Amazon and finance screens.

Monthly rhythm (suggested)

- **1st of month**: set the Music Majlis target; the monthly counters reset.
- **Daily**: confirm the Marketplace Specialist has cleared yesterday's abandoned carts; watch Cocoblu 90+ and open blockers.
- **Month-end**: send the monthly summary to the Sales Head.

5. Logistics

The Logistics portal handles deliveries and Music Majlis order fulfillment. You see only the Logistics sections your designation is allowed to use; the warehouse role sees the whole portal, while some staff are given just specific pages (e.g. Reseller Deliveries, Product Transfers and Delivery Reports).

Logistics Dashboard

- A live snapshot: orders to fulfill, tracking pending, ready to dispatch, delivered today, delayed shipments, **missing invoice**, and reseller/cargo counts.
- Module cards open each area. The menu is grouped: Channels, Deliveries, Operations, Marketplace.

Shopify / Music Majlis Orders

This is the order-processing screen. Orders arrive from the website automatically.

Find and view orders

- Press **Sync now** to pull the latest orders. Use the search box (order number, customer, mobile, email, SKU or product) and the filters (fulfillment, status, city, method, dates).
- **List view** splits “Needs action (unfulfilled)” on top from “Fulfilled & closed”. **Board view** shows orders as cards by stage — drag a card to change its stage.
- Drag column headings to reorder, use **Columns** to show/hide; your layout is saved for you.
- Click an order to open it; use **View in Shopify** to see the original order online.

Pick, pack and dispatch an order

- 1 Open the order. For each product line set the source location and tick **Picked** and **Packed** as you prepare it.
- 2 Record the **TLE invoice**: type the invoice number and value, or upload the invoice PDF. If the value or items don't match the order, you must add a remark before it can be completed.
- 3 When everything is picked and packed, set the courier (Aramex, Quikup, ... or **In-Store Pickup**), enter the tracking number, and press **Fulfill & push tracking to Shopify**. In-store pickup doesn't need a tracking number.
- 4 If Shopify rejects the push, the record is kept and you can retry — nothing is lost.
 - An order **cancelled** in Shopify shows here as cancelled. If it was already invoiced you must enter the **SRT** and **PRT** document numbers to close it; if it was cancelled before invoicing, a short reason closes it.

Reseller Deliveries

Manual deliveries to resellers/customers, with the invoice and delivery order kept on file.

- 1 Press **+ New delivery**. Use **Upload Invoice** and **Upload DO** — each reads the document and fills in the customer, numbers, value and delivery address, and stores the PDF (the button turns green and you can re-open it with **View**).
- 2 Add the driver, driver phone and vehicle number. Known customers/drivers/vehicles auto-suggest as you type and fill in their details.
- 3 Set the **scheduled delivery date** (lateness is measured from this), then **Save**.
- 4 Update the status as it progresses (New → Preparing → Ready → Out for delivery → Delivered).

- 5 Use **Print** on a row for a delivery note to sign. Use the recall bar (customer / invoice / DO / date) to find older records — the list shows only the most recent by default.

Product Transfers (PRT)

- 1 Open **Product Transfers** → **+ New PRT**. Enter the order, SKU, product, quantity and the from/to branch, required date and urgency.
- 2 Press **Email** on a row to send the branch a formatted request — it sends from your own email and always copies purchasing. You can also Copy the text.
- 3 Move the status along as the branch responds. Deleting a PRT asks for a reason (kept in the log).

Delivery Reports

- **Delay**: orders and reseller deliveries running late. **Branch Support**: transfers by branch. **Courier**: shipments by courier. **Activity Log** and **API Errors** for an audit trail.

Master data (Manager only)

- Customers, drivers and vehicles build up automatically from the deliveries you save.
- Only the Manager can edit or remove them (e.g. fix a phone, add a licence/insurance expiry).

Techniline Operations — internal use. Keep this manual at your desk; ask the Manager if a section you need isn't visible to your designation.
